

TIP OF THE WEEK # 66

Transmission-based Precautions at AUBMC

The AUBMC policy on transmission-based precautions delineates the actions to be taken by the personnel who come in direct contact with the patient (physicians, nurses, technicians, support staff and others).

The Transmission-based Precautions are designed for patients with symptoms listed in the table "General Conditions Requiring Transmission Based Precautions" that is attached to the policy with the link below.

Please note that the transmission-based precautions are used in addition to standard precautions.

Please visit the policy for more details:
