

TIP OF THE WEEK # 72

Diagnostic Tests Prior to Admission

Patients who are being prepared for a planned admission to the AUBMC shall have their diagnostic tests performed prior to the admission whenever possible. Laboratory and imaging tests and procedures leading to a provisional diagnosis should be performed before admission.

The above procedure will improve the utilization of services at the Medical Center. All physicians are encouraged to assess the patient and determine the required tests and procedures and request their patients to have them completed prior to their admission to the Medical Center.
