

The Visit of a Team from Morocco to Lebanon

WHO supported a visit for a team from Morocco to the family medicine departments at both the American University of Beirut and the Saint Joseph University in order to conduct a study to assist in revising the Moroccan Faculty of Medicine basic programme.

The team consisted of the Director of Hospitals and Outpatient Care, and the Deans of the three Faculties of Medicine (Rabat, Fes and Casablanca), accompanied with WHO Representative in Morocco.

The Objectives of this visit were:

1. To know the basic training program in Family Medicine (content, layout of the program, and educational approaches);
2. To exchange with the persons in charge the pre-required steps that should be taken to succeed in their projects;
3. To visit the health services training places (at the first and hospital levels) to inquire the applied supervisory and organizational methods.
